

The UK's Trusted Partner In IGU Manufacturing.

www.euroview.glass

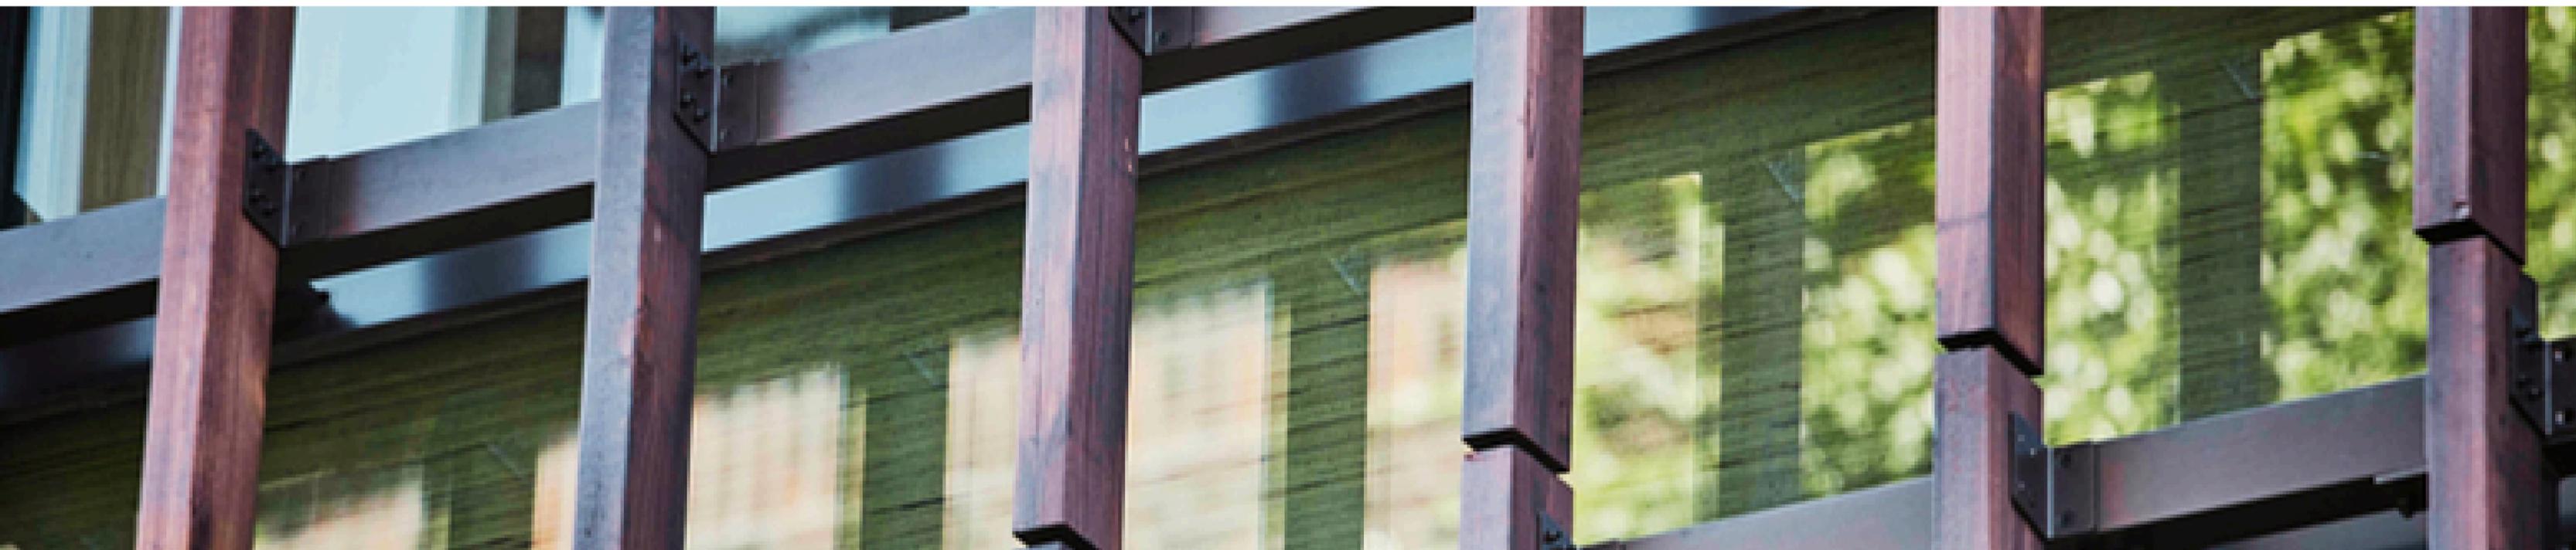

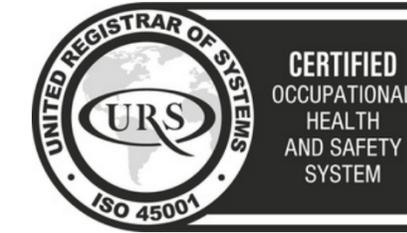

Your Trusted Partner for High Quality Glazing Solutions

At Euroview, we don't just supply, we support.

We're the UK'S trusted trade partner for glazing professionals across the UK, providing quality glass products, reliable turnaround times, and a service first approach that keeps your projects moving.

We understand your business because we work alongside it, helping you meet deadlines, exceed client expectations, and grow with confidence.

What We Do Best

High performance units made for installers, fabricators & façade specialists.

✓ Insulated Glass Units

Double, Triple, Oversized & Fire Rated IGU's Precision engineered to your exact specs, with performance that delivers.

✓ Structural & Silicone Sealed Units

Built for strength, stability, and long term reliability.

✓ Laminated, Acoustic & Solar Control

Certified solutions for safety, sound control, and compliance.

✓ Toughened & Heat Soaked Tested Glass (BS EN 14179)

Tested to the highest standards for strength and thermal safety.

✓ Custom Glazing for Curtain Walling, Rooflights & Facades

Complex specs? No problem. We create bespoke units to meet your most challenging requirements.

Double & Triple Glazed Insulated Glass Units

Specified for performance. Manufactured for certainty.

Euroview supplies high performance double and triple glazed insulated glass units for commercial, residential and façade projects across the UK.

Our IGUs are manufactured for contractors and fabricators who need consistent quality, reliable lead times and units that meet specification first time.

Every unit is fully traceable through production and manufactured in line with relevant UK construction standards, giving confidence in compliance, performance and project delivery.

We source premium glass from leading European manufacturers and combine it with proven spacer systems and controlled argon gas filling to produce sealed units that deliver strong thermal performance, acoustic control and visual consistency across a wide range of applications.

www.euroview.glass

Performance led specification

Our double and triple glazed units are designed to meet modern energy and acoustic requirements while maintaining the aesthetic intent of the façade. We work closely with contractors and consultants to ensure the correct build up is achieved for each project.

Manufacturing capability

Our facility is equipped for both high volume production and specialist façade packages. We regularly produce large format and oversized IGUs, alongside standard commercial unit sizes, with full traceability throughout manufacture.

Maximum unit sizes vary by specification and build up. For guidance on achievable sizes for your project, please email our estimating team at estimating@euroview.glass

Our options include

- ✓ Double and triple glazed configurations
- ✓ Low U-value solutions to support Part L targets
- ✓ Solar control and low-E coatings
- ✓ Laminated, toughened and heat strengthened combinations
- ✓ Acoustic performance enhancements
- ✓ Warm edge spacer bar systems with argon gas filling

Structural & Silicone Sealed Units Built for modern façade design

Euroview manufactures structural and silicone sealed insulated glass units for projects where standard IGU construction is not suitable. These units are typically specified for curtain walling, structural glazing and applications where the glass forms a visible part of the façade structure.

We work closely with façade contractors, system companies and specialist installers who require units that meet structural design intent while maintaining visual consistency across the elevation.

DOW Quality Bond™ accredited

Euroview operates under the DOW Quality Bond™ programme, providing independent assurance that our structural silicone processes, materials and production controls meet the required standards for structural glazing applications.

Applications and capability

Our structural and silicone sealed units are manufactured for:

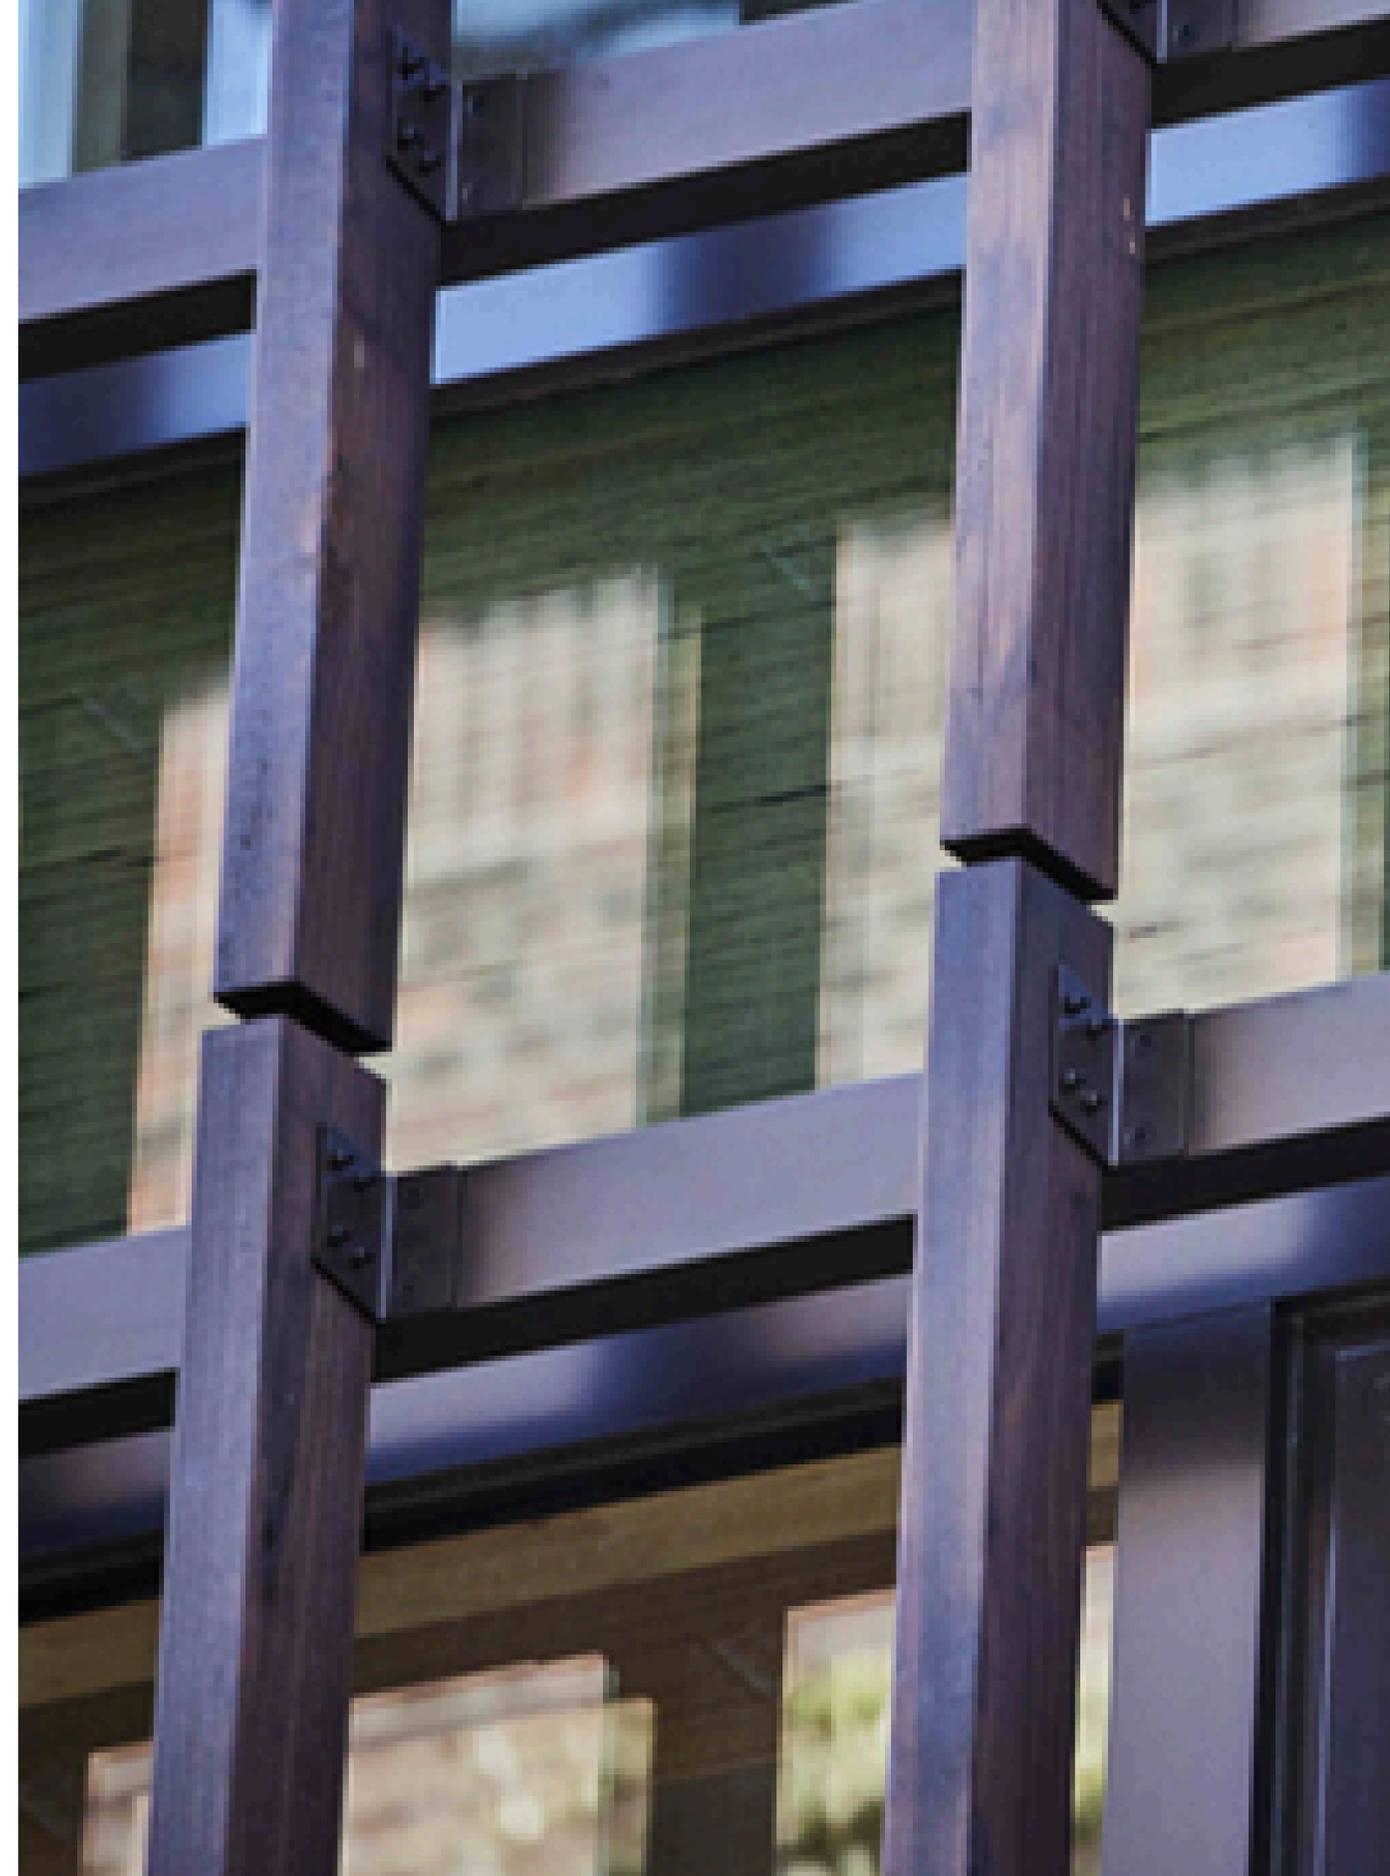

- ✓ Curtain wall and façade systems
- ✓ Two sided and four sided structural glazing
- ✓ Commercial and high rise developments
- ✓ Feature glazing and entrances

We produce units in a wide range of sizes and specifications, including laminated, toughened and specialist glass combinations, all built to suit system requirements and design loads.

Designed for structural glazing applications

Structural and silicone sealed units are produced where mechanical retention is reduced or concealed, and where seal performance and dimensional accuracy are critical. Our units are built to suit specific framing systems and structural requirements, ensuring compatibility with site installation methods and design loads.

High Performance Laminated Glass

Solar control, acoustic and safety solutions in one specification

Euroview manufactures high performance laminated glass units where solar control, thermal efficiency, safety and acoustic performance must work together within a single specification. These build-ups are widely used on commercial façades, high-rise residential and projects with higher compliance and performance requirements.

By combining advanced coated glass with controlled lamination and heat treatment, we produce laminated units that support energy targets, meet safety standards and maintain the visual consistency required on modern façade schemes.

www.euroview.glass

Specialist laminated capability

Euroview manufactures laminated glass in house using our wide range of solar control and low-E coatings across a full range of heat treatment options. Laminated glass can be supplied toughened, heat strengthened or heat soak tested to achieve the required strength, safety classification and thermal performance while maintaining the intended façade design.

Acoustic interlayers can be incorporated where improved sound reduction is required, with all laminated build ups suitable for use within double and triple glazed insulated glass units.

Where heat soak testing is specified, full test records are retained to provide a clear audit trail for contractors, consultants and warranty documentation. Laminated glass can also be supplied to P5A classification where enhanced security and impact resistance are required.

All our products are traceable and available to support compliance and building control requirements.

For project specific laminated specifications, build-ups or performance guidance, please contact our estimating team at estimating@euroview.glass

Toughened, Heat Soak Tested & Heat Strengthened Glass

Euroview supplies heat treated glass for commercial and residential projects, including toughened, heat strengthened and heat soak tested products. Glass can be supplied as monolithic panels, within laminated glass or as part of insulated glass units with solar control and low-E coatings. All processing is carried out under controlled conditions with full traceability, and heat soak test records are available where specified to support compliance and project documentation.

Toughened Glass

Thermally processed safety glass with increased strength and safe fragmentation. Used in façades, doors, balustrades and IGUs where safety and impact resistance are required.

Heat Soak Tested

Toughened glass that has undergone additional heat soak testing to reduce the risk of spontaneous breakage. Commonly specified on large façades and high rise projects where added assurance and traceability are needed.

Heat Strengthened

Heat treated glass offering increased strength and thermal resistance. Often used in laminated and coated glass applications where extra strength is required without full toughened fragmentation.

All toughened, heat strengthened and heat soak tested glass is processed within our BSI-certified manufacturing facility and in line with relevant UK and European standards. Full batch traceability is maintained throughout production and heat soak testing records are available where specified to support project documentation, compliance and handover requirements.

Decorative Glass

Consistent colour. Durable finish.

Euroview supplies decorative glass solutions for façades and external glazing where colour consistency, coverage and durability are required alongside reliable IGU performance. Our decorative range is commonly used for spandrel panels, feature glazing and areas where a uniform external finish or obscured appearance is needed.

We apply ceramic paint in house under controlled conditions, allowing glass to be colour matched to RAL references and produced with consistent coverage across large runs and phased deliveries. Once processed, the coating becomes a permanent part of the glass, providing a hard-wearing finish suited to external environments.

Decorative glass can be supplied toughened or laminated and incorporated into double or triple glazed insulated glass units. Satin and obscured finishes are also available where privacy or light diffusion is required within façade applications. All decorative products are manufactured with full traceability and in line with relevant UK and European standards, ensuring consistency across elevations and confidence in specification compliance.

For project specific colours, finishes, please contact estimating@euroview.glass.

Reliable Transport. Trusted Nationwide.

Getting your glass to site, safely, on time, every time.

At Euroview, we know that delays cost money. That's why our delivery service is built for speed, precision, and total reliability. Whether it's a single unit or a full load, we make sure your glass gets where it needs to be.

- ✓ **FORS Silver accredited**

Trusted standards in fleet safety & compliance

- ✓ **LOLER certified stillages**

Secure transport that protects your glass

- ✓ **ALMI trained drivers**

Specialist handling by trained professionals

We deliver across the UK, five days a week
safe, reliable, and trade ready.
